INbiz2
Suite of integration services which are based on Microsoft BizTalk Server

INbiz2

“Enhance your business with INBiz2 integration services”

*IN2 Group offers a wide range of products and services related to retail, wholesale and distribution channels, which functionally and financially suits end-users and their needs. The range of products and services includes the implementation of IN2 products (OPUS*ERP & ERP*BI), standard business solutions, integration with other applications and their adoption and customization to user requirements.*

INbiz2 is a suite of integration services that IN2 Group offers, which are based on Microsoft BizTalk Server integration platform. Integration solutions, due to various available platforms, databases, file formats and embedded protocols, are amongst the most complex IT procedures. IN2 Group uses the proven integration server platform, Microsoft BizTalk Server for integration solutions. Utilizing the advantages of this technology, IN2 Group, through a number of projects and various implementation scenarios has gained rich technical and business experience.

Some of the biggest projects which are based on the BizTalk Server integration platform are:

- **INA** - BizTalk platform is used in the automated process of sending and receiving data between 500+ integrated Point Of Sale (POS) terminals and a central SAP system.
- **Ministry of Justice** - implementation of central integration environment in the Ministry of Justice as a central point of data transfer between the state administration bodies.
- **MUP** - implementation of BizTalk integration platform within the scope of the internal systems on varying platforms in Enterprise Application Integration (EAI) scenarios and implementation of a stand-alone system for safe, robust and correct interchange of details with other government institutions in Government-to-Government (G2G) scenarios.
- **City of Zagreb, State Geodetic Directorate (SGD)** - implementation of BizTalk integration platform as a stand alone gateway which enables quick and valuable build of new electronic services, in a way that it connects existing internal information systems and separate business processes.
- **Raiffeisen bank Kosovo** - integration platform for joining all dislocated subsystems with the banks central system. With the use of BizTalk server, all of the banks automated teller machines are connected to the central system. Taking into account that the system required 99.99% accuracy and up-time.
- **Ministry of Public Administration** - system for connecting with the department of foreign and European affairs for the purpose of registering new born babies from abroad.
- **Ministry of Maritime Affairs, Transport and Infrastructure** - integration with tax office and preparation of services for announcements of sailing vessels.
- **HEP (Croatian Electricity Company)** - implementation of B2C solution which connects a group of services responsible for sending payment slips and invoices electronically to end users. The e-Payment system automates and simplifies the process of bill payments where the client can active the option that payment slips and electricity bills arrive to their personal net banking. The e-Invoice system automates the creation, archiving and sending invoices electronically to clients (includes digital signature, timestamps, archiving, UBL XML standard etc.).

IN2 group is in a position to offer all functionalities and advantages of BizTalk Server platforms through INbiz2 integration services. INbiz2 is a collection of integration services where the user can choose to utilize only the functionalities required to improve their business processes.

INBiz2 services include the following functionalities of BizTalk Server:

Capabilities

Hybrid-cloud integration

Extend the functionality of your existing apps, connect cloud applications, mobile devices and external partners easier, faster and more securely than ever before.

Service oriented architecture (SOA)

Microsoft's SOA platform fuels business innovation through composite applications, boosts business agility via Business Process Management (BPM) and allows you to harvest increased value from existing investments by offering cross platform interoperability.

Enterprise Service Bus (ESB)

An Enterprise Service Bus (ESB) is a shared messaging layer that gives you a consistent, scalable, and flexible means of coordinating across disparate loosely connected services to execute business processes. Microsoft BizTalk Server is the most trusted ESB engine in the world, used by more than 12,000 customers. You can count on BizTalk Server for your mission-critical integration solutions.

Electronic Data Interchange (EDI)

Connecting people, systems, and partners has become more important than ever. As the need for business continuity extends outside the firewall, you need a solution to securely and efficiently manage your application endpoints.

Business Activity Monitoring (BAM)

Business Activity Monitoring provides both technical and nontechnical users with end-to-end visibility into business processes on a near real-time basis. This helps you make timely and well-formed decisions, improving your IT agility and productivity.

Business rules engine (BRE)

A business rules engine (BRE) provides the tools to define, store, retrieve, and execute business rules outside your applications. This allows the rules to be referenced from multiple applications and to be changed to adapt to changing regulations or business policies without recompiling and redeploying the applications.

Business process management (BPM)

Microsoft provides powerful business process management (BPM) capabilities to automate, monitor, manage, and evolve your business processes to improve the efficiency of your business.

Business to business (B2B)

By using Microsoft Integration Technologies, including BizTalk, automates business processes with trading partners, all the way from your systems to theirs.

Connectors

Line of business adapter pack

Microsoft BizTalk Server includes predefined, Microsoft supported connectors to the top enterprise software suites and protocols including SAP Siebel, Oracle, PeopleSoft, JD Edwards, TIBCO, IBM and others.

Industry solution accelerators

Meet necessary compliance criteria for your specific industry.

Radio Frequency Identification (RFID) platform

Provides a scalable, extensible platform for development, deployment, and management of rich radio frequency identification (RFID) and sensor solutions.

Windows Azure Service Bus

Service Bus is messaging infrastructure that sits between applications allowing them to exchange messages in a loosely coupled way for improved scale and resiliency.

Windows Azure BizTalk Services

Provides Business-to-Business (B2B) and Enterprise Application Integration (EAI) capabilities for delivering cloud and hybrid integration solutions.

Advantages of INBiz2 services:

REDUCE COSTS

BizTalk Server has the lowest total cost of ownership in the industry and reduces your time to market:

- leverage Virtualization to reduce your hardware costs
- replace costly EDI infrastructures with BizTalk Server
- get sustained value with a new BizTalk release every 2-3 years

DRIVE EFFICIENCY

BizTalk Server makes organizations more efficient by orchestrating cross-functional enterprise processes:

- eliminate manual processes through automation
- automate processes that span application boundaries through integration
- leverage technologies like RFID to make supply chains more efficient and get better visibility into your assets

EXTRACT VALUE

Extract value from existing IT investments with 25+ adapters that easily connect to legacy systems, mainframes, and SAP:

- avoid high cost Rip and Replace of existing legacy systems by extracting data from legacy applications and transforming it into valuable information
- extend your SAP and Oracle applications to solutions like collaborative reporting with SharePoint and Business Intelligence with SQL BI
- connect your on-premises applications to next generation cloud applications

INCREASE BUSINESS AGILITY

Rapidly adapt to changes in business and technical requirements:

- integrate acquired or existing legacy applications using BizTalk's tools and adapters
- adapt your custom applications to changing IT requirements by basing them on BizTalk
- use custom business rules and adjust them on the fly
- manage your IT environment with greater efficiency with the virtualization support built into BizTalk

About IN2 Group

IN2 Group was established in 1992 in Zagreb. The company is specialized in development, implementation and support of customized software solutions, IN2 ready-made products and implementation of standard business solutions. Today, IN2 Group consists of 8 interconnected companies in 6 countries in the region. IN2 Group covers various business areas, with the emphasis on public sector, financial sector and insurance, healthcare, telecommunication, enterprise and utility companies. Numerous partnership statuses with globally leading IT companies imply additional quality guarantee for IN2 products and services; the company is Oracle's largest partner in the Adriatic Region and the leading partner for Oracle Applications. It holds Oracle Platinum status, as well as Microsoft Network Partner status with 1 Gold and 9 Silver competencies.
